

Central Bank

Hardware, Software and Internet Requirements for E-Deposit Service

Minimum software and hardware requirements needed for E-Deposit.

- Microsoft Windows 7 or 8 (Central Bank recommends having the Automatic Updates feature enabled to help reduce security threats).
- Internet Explorer 9-11 or later.
- Minimum 1GM RAM.
- Super VGA monitor capable of at least 1024x768 resolution.
- One available USB 2.0 (or higher) compliant port.
- Broadband Internet Connection (DSL, cable or other high speed connection).
- An Anti-virus / Anti-spyware program that is updated daily.

Other Considerations

- During the initial setup, a minimal amount of software is installed including scanner drivers. In order to install this software, the user will need to be logged into the system as an Administrator.
- In the event of website updates or technical difficulty, the bank may attempt to send email alerts to the e-mail address provided by the customer at sign up. In order to be alerted of these events, customers should make sure the address provided is current.
- A reliable high speed Internet connection is required.

These requirements are posted as of September 9th, 2015, and may be updated quarterly. Please check Central Bank's website quarterly for changes or updates to these requirements.
